I/O Expansion card

● 2 PT1000 / NI1000 / Analog Inputs
● 1 Klixon / PTC / KTY84 Input
● 1 Klixon / PTC / KTY84 Output
● 2 Analog Outputs

Drive Requirements

The EXP-IO-SENS-1000-ADV card is designed for the following drives:

- Drive Type: ADV200 WA (all versions); Recommended Firmware Release: 1.0 or later.
- Drive Type: ADV200 (all versions); Firmware Release: 7.0 or later.

Description

The EXP-IO-SENS-1000-ADV is an optional expansion card for the ADV200 and ADV200 WA product family. This card enables measurement of ambient temperature values via PT1000 or NI1000 external probe, and of motor temperatures via Klixon, PTC or KTY84 external probe. The following I/O terminals are available on the card:

- 2 x Inputs for temperature measurement via PT1000 or NI1000 probe within the range of -20°C ÷ 150°C / -4°F ÷ 302°F or alternately working as 2 x analog inputs for analog measurement (selection via software configuration)
- 1 x Input for temperature measurement via Klixon, PTC or KTY84 probe;
- 1 x Output for Klixon, PTC or KTY84 probe power supply;
- 2 x Analog Outputs.

About the Analog Outputs:

- The analog outputs are manually configurable by means of a dedicated dip switch to select current or voltage mode (see picture in the next paragraph);
- The analog outputs can work in current mode within the range of 0 ÷ 20mA or in voltage mode within the range of 0 ÷ 10V.

NOTE The drive can host one single card.
Connections

Card pinout details are shown below:

Channel 1 analog output factory-configured for output 0 – 10V

Channel 2 analog output factory-configured for output 0 – 10V
**Note:**

Terminals 92-93 and 96-97 can be used as ANALOG INPUT

Terminals 51-52 and 53-54 can be used as TEMPERATURE SENSOR INPUT
### Probe Wiring Diagrams

This section describes the wiring schema for connecting thermistors, RTD and sensors with reference to the most frequently used configuration. If the distance between the probe and the drive is longer than 3 meters (9.84 feet) 4-wire configuration is advisable.

- **PT-1000 or NI1000 2-wire connection:**

  ![2-wire connection diagram](image)

  where $R_w$ is the resistance of the wire and $R_t$ is the resistance of the probe. Use shielded cables to connect the PT1000/NI1000 to the card and shortcut the shield to the metal cover of the drive (System Ground).

- **PT-1000 or NI1000 3-wire connection:**

  ![3-wire connection diagram](image)

  where $R_w$ is the resistance of the wire and $R_t$ is the resistance of the probe. Use two twisted pair shielded cables to connect the PT-1000/NI-1000 to the card and shortcut the shield to the metal cover of the drive (System Ground).
• **PT-1000 or NI1000 4-wire connection:**

```
\[ \text{I-source} \quad Rw \quad Rw
\]
\[ \text{V+} \quad Rw \quad Rw
\]
\[ \text{V-} \quad Rw \quad Rw
\]
\[ \text{L-sim} \]
```

**4-wire connection electrical diagram**

where \( Rw \) is the resistance of the wire and \( Rt \) is the resistance of the probe. Use two twisted pair shielded cables to connect the PT-1000/NI-1000 to the card and shortcut the shield to the metal cover of the drive (System Ground).

---

• **Klixon / PTC / KTY84 connections:**

```
\[ \text{10V} \quad \text{S2+} \quad \text{Klixon/ PTC/ KTY84} \]
\[ \text{TMP} \]
```

**Electrical diagram**

Use twisted pair shielded cables to connect the probes to the card and shortcut the shield to the metal cover of the drive (System Ground).
Installation

To install the card refer to the “Installation of optional cards” chapter in the “ADV200 WA & ADV200 Quick Start” installation handbook. This chapter describes the procedure for installing the card. During installation bear in mind the following:

- Do not connect an external voltage or current generator to the ports as specified in the connections table;
- The analog I/O terminations have no mutual galvanic insulation. Galvanic insulation is only available between the terminations and the control card.

Power LED:
### Commissioning

Once the card is installed, the commissioning phase can start. Use the keypad to go to menu 02, which will show that the card is properly recognized and ready to operate.
